

# osCommerce SEO Friendly Urls

Created by John Barounis, [www.johnbarounis.com](http://www.johnbarounis.com)

Current version: 2.0.0

The creator of the famous [Alternative Administration System](#) for osCommerce, presents you the osCommerce SEO Friendly Urls addon!

SEO Friendly Urls is a new addon for the osCommerce CMS that will change the default urls into what a modern website's urls should be!

## How to remove the addon?

First set the option **Remove SEO Friendly Urls FREE ?** to Yes. By setting Yes the addon will be auto removed after a visit on any page in your front store.

Secondly undo the installation steps.

NOTE: if you visit a page on the front store SEO Friendly Urls will be auto install again. So it is better to set true in the constructor of the class. for example: `$seo_friendly_urls = new seo_friendly_urls(true);` which can be found in the catalog/includes/classes/seo\_friendly\_urls.php at the bottom of the file and then undo the installation steps.

If you have any problem removing the addon just send me a message:
